METRASTOP

• DUAL LIGHTWEIGHT BALLOON

(weight 70gr)

Postpartum Balloon

- STIFF CATHETER

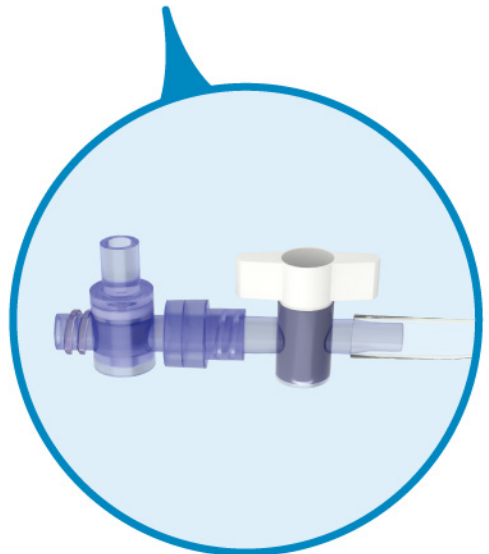

EASE OF INSERTION
(without using a forceps)

EASE OF POSITION

**EASY AND QUICK CATHETER REPOSITIONING
IN CASE OF MISPLACEMENT**

**VERY FAST PROCEDURE
OF INFLATION AND DEFLATION**

The inflation valve of the **transparent lumen** enables to maintain the syringe connected during the inflation process

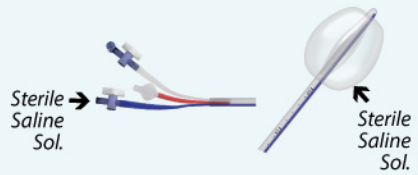

HOW DOES IT WORK?

1) BALLONS INFLATION

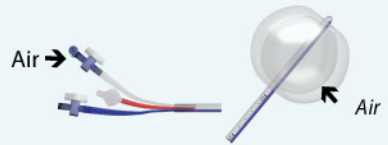

1° EXTERNAL BALLOON

60 ML syringe of sterile saline solution → **BLUE LUMEN: "WATER"**
(close the stopcock)

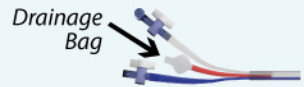

2° INTERNAL BALLOON

Same 60 ML syringe of air → **TRANSPARENT LUMEN: "AIR INFLATION"**
MAX 420 CC (CA 7 PUMPS CONTINUOUSLY)
(close the stopcock)

2) CONNECT THE DRAINAGE BAG

Fluid collection bag (included) → **RED LUMEN (DRAINAGE)**

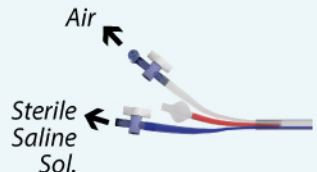

3) CATHETER REMOVAL

1° INTERNAL BALLOON

TRANSPARENT LUMEN → Remove the valve and leak the air out

2° EXTERNAL BALLOON

BLUE LUMEN → Aspirate the content with a syringe

- It is also possible to cut the catheter lumens in order to deflate the balloons more quickly -

COMPANY PROFILE

RI.MOS. began designing and selling gynecology products in 1988.

Since then, it is the only Italian manufacturer of a complete range of disposable products for gynecology / obstetrics and IVF.

R&D and engineering of all products are carried out internally and the manufacturing process involves highly experienced operators and suppliers in the manufacturing of medical devices.

Thanks to a modern production technology, **RI.MOS.** products are assembled by trained operators in **ISO 7** and **ISO 8** clean rooms.

RI.MOS quality system is certified according to **ISO 13485:2003**.

RI.MOS. is able to realize small customized productions in order to meet every need of the private gynecologist and Hospital.

RI.MOS. is the only Italian company actively engaged in the development and production of a complete range of disposable devices used for artificial insemination and IVF.
